

PolyBlend® Dry Polymer Feed System

Model DP105-TP

The PolyBlend® DP105-TP is a low cost, automated dry polymer feed system designed for applications that require less than *3.3 lbs/hr dry polymer. The DP105-TP is ideal where maximum polymer performance and simplicity is needed.

The design, which is patented in the U.S., includes a rotating impeller that allows the water to be drawn in from the top of the tank creating a vortex. The vortex carries the dry polymer into the mixing impeller where it is exposed to a high energy agitation. The high energy ensures proper activation and prevents agglomeration.

The prepared polymer solution is then ready to be fed in applications requiring batch feed, or the solution can be transferred into a feed tank for applications requiring continuous polymer feed.

The DP105-TP offers optimum polymer performance with an economical advantage.
